TEHAMA MARY BLACKBIRD Y684

TEHAMA MARY BLACKBIRD T073

- ▶ TAHOE is one of the most complete bulls in the Angus breed. A multi-purpose sire that does everything well.
- Progeny have built a strong proof for many of the most notable traits. Check out his accuracy levels, this bull is here to stay!
- Ranks in the elite top 1 percent performance of the Angus breed for both \$Maternal and \$Weaning, while still delivering exceptional end-product merit.
- ▶ He will improve Marb and REA while adding eye appeal, dimension and improving feet and udders.
- Few sires can match his combination of Calving Ease, performance, maternal traits and carcass merit while improving type and longevity.

Sire of QUANTUM, 7AN392 MOMENTUM

Paternal Grandsire of QUANTUM, 7AN322 PROGRESS

♦ QUANTUM is one of the best in the entire breed for his combination of growth and carcass excellence. ♦ Serious breeders will find QUANTUM to take advantage of his boost for both Marbling and Ribeye.

♦ Easily one of the favorites on the eyes when he sold, QUANTUM maintains this presence today.

♦ High CED, SC, Docility and positive foot scores are added bonuses from this powerful MOMENTUM son.

- ♦ GROWTH FUND defies the odds in terms of genetic merit. His elite EPD profile provides modest Calving Ease with off the charts growth, RADG and \$Weaning.
- ♦ It's rare to find a bull that captures one's eye on paper and in the pasture. GROWTH FUND is a structurally sound, moderateframed bull with a powerful hip and rear leg. He exhibits extra neck extension, a smooth shoulder, is wide-topped and wide-based with muscle expression and depth of body.
- His first calf crop has demanded top prices and it's obvious that GROWTH FUND consistently stamps his progeny with exceptional phenotype and added performance. Many breeders report his calves to easily be the top-end in their programs.
- His powerful dam is backed by the Select Sires cornerstone sires of WEIGH UP and 5050, and his third dam is the legendary 614 cow - Angus royalty that has proven to add performance and value year after year.
- ♦ Want to increase your assets? Invest in GROWTH FUND!

- PEYTON offers extreme growth, yet maintains top 3 percent CED and his early progeny data backs it up.
- Better than average in his foot design, PEYTON's offspring are made-right and highly marketable.
- With 20 EPDs and indexes ranking in the top 10 percent of the breed or better, expect PEYTON to boost the parent average in virtually any mating.

7AN368 CONNEALY COMRADE 1385

♦ COMRADE will turn nine this year and each week adds to his record as the all-time, high-selling beef bull at Select Sires.

This Calving Ease king delivers consistent, attractive calves who excel for Docility and moderate frame size.

♦ Let COMRADE eliminate calving risk in your heifers while providing undercontrol size and above-average Marbling and REA.

♦ Daughters of COMRADE make sleek, useful cows with an attractive pattern and super udders.

Method

The Method Genetics index values are derived from Method Genetics EPDs combined with industry-focused economic weightings. The Method EPDs are generated from a multi-trait, 'single-step' genetic evaluation that uses per-

formance measures, ancestral pedigree, and available DNA genotypes. This single-step approach incorporates the genotypes directly into the genetic evaluation process and was implemented at Method in the summer of 2014.

MATERNAL PRODUCTION INDEX (MPI):

The Maternal Production Index is reported in dollars per calf produced from the breeding herd with Angus-based genetics. It encompasses direct and maternal calving ease, heifer pregnancy, weaning growth, maternal milk, and mature size differences in a scenario where replacement females are retained and calves are marketed at weaning.

QUALITY POUNDS INDEX (OPI):

The Quality Pounds Index is reported in dollars per calf for herds with Angus-based genetics. It focuses on the terminal side of the herd's business for feedlot gain and carcass merit genetic differences. There are no provisions for calving ease or maternal traits, with the assumption that all calves are under a retained ownership scenario fed out and marketed on a premium quality-based grid.

P.O. Box 8802 / Saint Joseph, MO 64508 / www.MethodGenetics.com Sally Northcutt, Ph.D. • Email: snorthcutt@methodgenetics.com

Bill Bowman • Email: bbowman@methodgenetics.com

Genetics Index / Percentile METHOD GENETICS INDEX PERCENTILE RANKS (%):

Method Genetics™ Selection Index Key Used in the catalog

A numeric ranking of the animal's Index values on a 1% to 100% scale. A lower numeric value is considered more favorable. For example, a 25% presented with an index indicates that animal is in the upper 25 percent of the animals in the Method Genetics genetic evaluation for calves born in the last five years.

RETAINED OWNERSHIP INCOME (ROI):

Cattle producers interested in a complete production system approach from conception through carcass end-point can use the Retained Ownership Income index. ROI ties together reproduction, calving ease, maternal genetic merit, growth throughout the calf's lifetime, and quality based carcass merit in an Angus-based herd. The ROI is reported in dollars per calf produced in the herd, and consolidates the sub-indexes of MPI and QPI.

♦ One of only two proven bulls in the breed with his combination of BW to YW spread, exceptional end-product value and elite docility.

♦ Consistently sires extra depth of body and fleshing ability with dependable performance. His progeny continue to be standouts at 44 Farms.

His dam is one of the most impressive cows you will find. Backed by the Ruby cow family and the Select sires cornerstone sire, CAPITALIST.

With modest milk and easy fleshing ability, he is a cow maker sire for harsh, low input environments.

PRIME PURSUITS IS POWERED BY

A VISION IS ONLY AS POWERFUL AS THE CAUSE TO WHICH IT IS ATTACHED

Walmart's bold vision is to respond in dramatic fashion to consumer demand for better beef and a greater understanding of the U.S. food chain. The mission of Prime Pursuits is to elevate beef production from a commodity industry to a specialized business for cattle producers, large and small. A producer driven program, Prime Pursuits, is a paradigm change for the beef industry and rewards the men and women of production agriculture for their hard work and quality Angus beef production.

Best of all, this community of Angus cattle producers can bring more families and friends together around the table than ever before to build better life experiences and enjoy delicious Angus beef.

NOW THAT'S A **VISION** TO **FOLLOW!**

TOGETHER, GREATER THINGS ARE YET TO COME!

44 Farms has teamed up with Select Sires to provide proven, predictable, value-added genetics to commercial customers to keep them in business for the long haul. Focusing on maximizing pregnancies for our customers with the highest fertility semen and industry leading service, we make it easy to increase profitability and add value to your bottom line.

We recognize the importance maternal characteristics play in your breeding decisions - that's why we keep our genetic offerings balanced and versatile. Whether you are looking to sell heavy calves, retain ownership or retain replacements for your operation, you'll be covered.

Through the use of 44 Farms genetics, you have unique access to our innovative supply chain that rewards progressive commercial cow/calf producers for utilizing superior genetics and participating in comprehensive vaccination and management practices.

The Prime Pursuits program is designed to add value to commercial producers bottom line – all while making our industry stronger and providing a higher quality product for the end consumer. From genetic selection through harvest - you will have access to key, real world data to use as you follow your calves performance in order to best manage your operation for optimal profitability.

- · No Hormones Added
- · Third-Party Verification
- Predominately 44 Farms Genetics
- Meet the USDA Definition of Angus
- · Weaned for a Minimum of 45 Days
- · No More Than 90 Days from Youngest to Oldest in Group
- · Subject to Minimal Sort by a 44 Farms Representative to Ensure Uniformity

Dam of HERDSMAN

- A multi-use sire who brings it all to the forefront: excellent phenotype, stellar EPDs, rich pedigree and outstanding performance all in one complete package.
- HERDSMAN is admired by all that have seen him, impressive in the flesh and on paper. It's rare to find a bull that puts it all together in such a usable format.
- High growth and \$Weaning sire who maintains foot quality and is modest for YH and MH.
- His highly predictable pedigree is built from breed legends. His dam has produced more A.I. stud bulls than any dam in recent history.
- Use this bull with confidence, the foundation is solid to build from.

BREEDING SUCCESS

THE WORLD'S LEADING BREEDING MANAGEMENT INDICATOR NOW FEATURING THE BREEDING BULLSEYE"!

The NEW ESTROTECT™ Breeding Indicator featuring patent pending Breeding Bullseye™ technology makes it easier than ever to identify cows that are in heat, pinpoint timing for AI and Timed AI protocols, as well as confirm successful pregnancies.

According to third-party research, when the new ESTROTECT™ Breeding Bullseve[™] is rubbed off by mounting activity, cows are up to three times more likely to conceive. Not only does ESTROTECT™ with the Breeding Bullseye™ indicate when a cow is in heat, it tells you exactly when the animal should be bred to achieve optimal results.

To learn more about the new and improved ESTROTECT™ featuring the Breeding Bullseye™, visit www.ESTROTECT.com!

BASIN PAYWEIGHT 1682

CCR MS PRETTY 4045P

BASIN PAYWEIGHT 006S

PAYWEIGHT'S pedigree combines the popularity of his sire (Payweight 1682) and dam (dam of Cowboy Cut) into one complete package.

Expect offspring to be deep-sided with plenty of muscle expression and marketability for both male and female offspring.

He ranks in the top 5 percent for WW and the top 15 percent for Docility and YW.

From Cow Camp Ranch and River Creek Farms, KS

Dam of PAYWEIGHT

We get a lot of requests for Simmental bulls that will sire baldies and here is

♦ Expect calves to be born easy, daughters that milk and are easy to handle

♦ Crossover bull for both maternal and terminal. Ranks in the top 3 percent

♦ MAIN EVENT does it because of his performance, muscle and eye-appeal in both his male and female progeny. He does this without excessive frame size.

♦ The breed's most popular SimAngus™ sire! He ranks No. 3 in registrations among all sires in the breed, Simmental and

♦ His females are becoming sought after as replacement heifers for both seedstock and commercial.

♦ MAIN EVENT is a huge spread sire! He is truly one of the unique beef bulls to come along this decade!

CAPTURING THE VALUE OF A.I. IN COMMERCIAL HERDS

John B. Hall, Ph.D.

Extension Beef Specialist, University of Idaho

Artificial Insemination (AI) is poised to drive genetic change in the beef cow/calf segment as it did in the dairy industry. The use of AI fueled incredible gains in milk production, milk quality and efficiency and completely revolutionized the dairy industry.

The economics of AI and its ability to increase genetic improvement, uniformity and consistency in a calf crop has been well understood for quite some time, but management constraints have limited its widespread use in the beef industry. With the advent of new technologies, new synchronization programs, improved genetic predictions and a marketplace that is rewarding both consistency and quality, the beef industry is positioned to see dramatic increases in the use of AI.

New Systems Make A.I. Workable

Time and labor are the primary reasons producers indicate as a barrier to adoption of A.I. in commercial beef cows and heifers (NAHMS, 1998). Advances in fixed-time A.I. (FTAI) systems for beef cattle resulted in options that reduce cattle handling and time associated with A.I. while producing consistent results of A.I. pregnancy rates from 50 percent to 65 percent. For example, a Missouri researcher conducted on ranch demonstrations where they inseminated 7,028 cows in 73 herds across the state. Average pregnancy rates to A.I. in cows synchronized with the CO-Synch + CIDR protocol was 62 percent with only 7 herds having a pregnancy rate below 50 percent. Pregnancy rates to FTAI for the last 6 years in the UI herd at the Nancy M. Cummings research station are shown in this table.

Female	Semen Type	AI Preg Rate	Range
Heifers	Conventional	61.9%	57.6% - 70.2%
Heifers	Sexed	48.4%	26.8% – 72.5%
Cows	Conventional	54.6%	38.7% - 62.6%

These pregnancy rates were achieved during research on modifying estrus synchronization systems; therefore, pregnancy rates were not optimized, but probably reflect what is typical in commercial operations.

Opportunities to Capture A.I. Value

Most cow-calf operations market feeder calves whereas an increasing number are retaining ownership through harvest. Retention of replacement females is also an important segment of the cow-calf enterprise. Generating replacement heifers for sale is another alternative income stream. There is some potential for reduction in breeding costs. All of these areas offer opportunity for capitalizing on A.I. In each case, return to cow exposed is the critical economic indicator.

Increasing Value of the Feeder Calf

The greatest opportunity for most cow-calf operations to capitalize on incorporation of estrus synchronization and A.I. is by increasing the value of the feeder calf. Research from Missouri and Florida, as well as other universities clearly indicates that one of the benefits of FTAI is having a greater percentage of the calves born in the first 21 to 30 days of the calving season. Increased age at weaning of calves, improved pregnancy rates, and the potential for increased growth due to improved genetics results in reported weaning weight increases of 20 to 40 lbs for the entire calf crop (Rodgers et al., 2012).

Fixed-Time A.I. makes artificial insemination logistically feasible in commercial beef operations. Each operation needs to conduct their own analysis. However, A.I. can be economically beneficial to the operation if value can be captured in one or more areas.

The value in shifting the percentage of calves born early in the calving season as a result of using FTAI cannot be underemphasized. Researchers at the University of Florida examined the economic benefit of using FTAI to reduce the length of the calving season and alter the distribution of calves born early in the calving season. They compared two years of a 120-day natural service breeding season to transition to a 70-day breeding season including FTAI in their 300 cow Angus herd. Over the five years of transition, they increased returns to the herd by over \$40,000 per year (Lamb, 2015).

Another opportunity that FTAI affords is to use more terminal type genetics. Bulls can be selected for terminal traits with the intent to sell all offspring regardless of sex of calf. A portion of the cows could be bred to these terminal type bulls which would increase weaning weights.

Figure 1. (top of next page) Shows impact of incorporating FTAI into the Univ. of Missouri cow herd on calving distribution.

Enhanced Final Product Merit

Taking calves all the way to harvest is arguably the best way to realize return on the A.I. investment. Carcass traits are among the most heritable and high-quality carcasses (upper 2/3 of Choice and Prime) are commanding a premium at present. However, the value of A.I. in a commercial cow-calf program that retains ownership is illustrated in a case-study of Hillwinds Farm in Virginia. The Sutphin family runs 600 cows on multiple farms. Over the years, they marketed their calves through retained ownership and kept track of performance as it related to the A.I.

breeding in the calf. Having both A.I. sire and dam increase return to cow by 22 percent and increase the percent carcasses grading choice by 38 percent compared to calves that were a product of a natural service dam and sire.

Calculating A.I. Cost/Benefit for Individual Operations

In making the decision to incorporate A.I. into the breeding program, operations should estimate costs and benefits to the operation. There are two programs currently available to assist in this decision analysis. The University of Nebraska's Breeding Cost Cow-Q-Lator is

an excel spreadsheet that can be downloaded for free. The University of Florida and Zoetis developed an iPad/iPhone app called A.I. Cowculator. Either of these programs can help with the decision to use A.I.

The Beef Reproduction Task Force developed the Estrus Synchronization Planner which allows producers to examine different synchronization systems, calculate costs, develop calendars for procedures, and ensure the proper amounts of synchronization products are on hand. You can find it online here: www.iowabeefcenter.org/estrussynch.html

Artificial Insemination has the potential to greatly improve profitability of commercial beef operations. Fixed Time AI makes implementation of a program much easier to execute than in the past. There are many ways to capture and add value with AI. Each producer should conduct his/her own analysis to determine the economic benefits of adopting A.I. and capturing value in multiple areas.

For more visit: http://beefrepro.unl.edu/resources.html

Percent Choice Carcass

No AI - 61%
A.I. Dam - 74%
A.I. Sire - 85%
A.I. Dam and Sire - 97%

Figure 2 - Impact of A.I. on carcass quality and returns to cow - Hillwinds Farm (Adapted from Sutphin, 2007).

WHEN WILL A.I. PAY IN A COMMERCIAL BEEF OPERATION?

First when...

- management of nutrition and health are already good so the probability of an acceptable pregnancy rates to A.I. is high.
- estrus synchronization protocols are followed carefully.

Next by capturing A.I. value (with one or more opportunities) when...

- calving distribution is shifted earlier in the calving season and high growth sires are used.
- a portion of the herd is mated to terminal sires.
- heifers calve earlier in the calving season resulting in greater longevity and lifetime productivity.
- maternal heterosis is captured through generating crossbred dams.
- increased carcass value is realized through retained ownership.

- ♦ An outcross Calving Ease sire that ranks in the top 2 percent of the breed for both CED and BW.
- ♦ He is long-bodied with added muscle shape, depth of rib with a more rugged design than most Red Angus sires.
- ♦ A unique combination of Calving Ease with added carcass merit of REA and Marbling.
- ♦ An outcross sire that will provide mating flexibility without sacrificing elite genetic merit.
- Merlin progeny of his quality and genetic value have been in high demand.

- ▶ ATOMIC is proving to be an excellent multi-purpose choice for Calving Ease, phenotype and carcass merit.
- Continues to build his proof as a Calving Ease sire ranking in the top 3 percent of breed for CED with a negative BW EPD, and does this without sacrificing phenotype or substance.
- Progeny are moderate-framed, long-bodied, have lots of center rib, possess good foot structure and are very docile.
- ▶ The ATOMIC sire group at the 2019 Beiber Production Sale had numerous crowd favorites and top sellers.

Why we do. WE DO

Select Sires is dedicated to being your trusted partner for genetics, service, fertility and reproduction. We pride ourselves on the relationships we develop with our customers and believe in the power of a handshake. We know the first step in building a relationship is communication and getting to know the people you depend on.

We have an extensive team of Beef Sales Representatives (BSRs) and professional technicians who are passionate about serving you and helping you reach your goals. On these pages, several members of our beef team share a little insight as to what motivates them to do what they do in the beef A.I. business. Our brand promise of "Your Success, Our Passion" is more than something we print next to our logo – it's what inspires us to serve you.

Jim Yance PREMIER SELECT SIRES

How important is trust when working with customers? It is of the utmost importance. With no trust, everything is left to chance. From the first visit and every interaction following, we build trust by following through and doing

what we say we'll do. They trust us when it comes to genetics, protocols and even herd management.

What has been your biggest reward? It has been rewarding to see success in the beef department and helping BSRs and sales reps grow their business. I get to help them become successful which, in turn, helps our customers. I have enjoyed meeting new people and building relationships. At the end of the day it's all about seeing our customers thrive.

What services set you apart? In our area, we offer turn-key services which includes the best technical support, high quality semen, accessibility, nitrogen tank refills, partnerships with local veterinarians and more. We take our time to visit with our customers on-site to discuss potential matings and fertility, which in turn, helps us meet their expectations. We're in the business to sell pregnancies so our customers can make more money.

Brad Unraw COBA/SELECT SIRES

Why do you do what you do? I was literally raised in the front seat of a Select Sires route truck, my dad worked for COBA until he passed away in 2012. It's all I've ever known and from a young

age I knew it's where I wanted to build my career.

Why is trust important to what you do? Many times when I go to a farm, no one is home. My customers trust me with their gate, garage, shop and house codes because they know I will get in and out and they will have everything they need and their tank will be filled. Customers trust my judgment on which bulls/products to use, that trust can take time to build with a new customer. I get around and see a lot of cattle and my customers will call me and ask "what are you seeing that you like and why!" They trust my opinion.

How important is building relationships with your customers?

Very important, you need to get to know them on a personal level and know their families. A lot of my customers I consider my friends.

What has been the biggest reward for you? Seeing my customers be successful and meet their operation goals.

Andrew Swanson MINNESOTA/SELECT SIRES CO-OP

What services set you apart?
We have adapted the BSR approach to growing the business. We believe that in order to succeed in the A.I. industry, we have to be available to install as much semen as possible. Our team of

BSRs and professional technicians is second to none in terms of quality of people and quantity of people able to service customers in all corners of our co-op area. We feel strongly that there is no herd too large or too small that we can't service.

What is your favorite aspect of the job? I enjoy many parts of my job. The MNSS team of BSRs is a great group of individuals that are easy to work with and they like to have fun while working! I also enjoy assisting and challenging customers to be open minded with anything from genetic selection, reproduction, logistics and application of Synchronization protocols, and marketing of their cattle.

What has been the biggest reward for you? I have enjoyed seeing different parts of the country and some of the best cattle in the world with my Select Sires job. However, the people that I have met are what make this job the most fun. I am thankful for the relationships that I have made and the friends that I've met.

Morgan Johnsrud ALL WEST SELECT SIRES

Why is trust important to what you do? Establishing trust with an individual means that I have their best interests in mind. On more than one occasion I have had to walk away from a potential

project because I knew it wasn't going to be successful for the new customer. My belief is that I have to 'earn the right' to come back year after year. I never take that for granted. That's why I love Select Sires' brand promise 'Your Success Our Passion'. Our customer's success is my success!

Why would you encourage someone to consider working with Select Sires reps? We have the best team. I truly believe that. This team is dedicated to seeing every single customer succeed. That looks different for each customer. We work hard to understand each customer's wants, needs and goals. I think our greatest strength is our willingness and ability to help solve the logistics of what needs to happen behind the slide gate of the breeding barn for the success of a breeding project. I don't know of another team that is willing and able to do what we do.

Anything else you want to add? My favorite quote: "You do not merely want to be considered the best of the best. You want to be considered the only ones that do what you do." - Jerry Garcia

Tim Olson SELECT SIRES MIDAMERICA

How do you build relationships with your customers? Being an active member in the local beef industry and involved in various organizations makes me very visible and approachable. This type of involvement leads to opportunities for

valuable conversations with producers which helps solidify their trust in me, and my intentions of helping them reach the goals they have for their specific operations.

What keeps you motivated? The customer's trust in me is my motivation. They trust that I am utilizing the best genetics and technology available to help them reach their goals. They know that I understand the labor, time and financial boundaries that each ranch has, and trust that I will find the best option for them and their operation.

How do you get through the tough times? The support I get through our cooperative helps me get through the tough times. Our business functions with customers in mind. So we operate in a way to support our customers' business fluctuations with compassion and understanding. Our optimism and focused direction on the value of the genetics and programs that we provide is very contagious.

Greg Beavers_ CENTRALSTAR COOPERATIVE INC.

How do you develop trust with customers? By being timely, honest and totally engaged with their operation's activities from assisting with farm chores, treating cattle to taking an interest in looking at their cattle.

Customers want an honest opinion and will respect it if you communicate with them. Making recommendations on what sires and/or management practices to suggest to customers is my passion. I truly enjoy mentoring the younger generation who are 'thirsty' to learn. I want to see them succeed even in challenging times.

Why do you do what you do? I thrive on my customer's success. I contribute to that in a small way by supplying superior genetics, service and herd management products that enable them to be more profitable in their operations.

What has been the biggest reward for you? I am rewarded nearly every time I visit a customer's farm. Learning of their success stories on how their cattle are performing and the results of our genetics and management products in their operation.

- ♦ A super choice for black heifers to generate moderate, three-dimensional females.
- ♦ Backed up by strong maternal pedigrees and he's top 1 percent for both Teat and
- ♦ FT. KNOX has earned 'customer favorite' status, siring functional, attractive and productive offspring.

"By including Select DTX in the bull ration for 50 days prior to our Breeding Soundness Exams, I saw dramatic improvement in the bulls' semen tests and 10% better morphology. Select DTX and Select Sires' mycotoxin testing will be included in our bull development protocol moving forward. It gave us a tremendous return on investment and also provided us with the assurance of satisfied bull customers."

DARRELL KAISER KAISER ANGUS - PARK, KS.

Beef cattle are exposed to mycotoxins everyday. Feeding rations that include mycotoxins will negatively affect performance by causing digestive upsets, erratic intakes and compromised immune systems. Seeing negative effects is hard because performance signs are sometimes hard to spot. It's "after the fact" that we usually see poor reproductive performance from feeding animals toxins. Contact your local Select Sires representative for details.

SELECT DTX WILL HELP ANIMALS
DEALING WITH MYCOTOXINS BY
PROVIDING A BIOLOGICAL CONTROL.

SELECT DTX CAN BE ADDED TO ANY RATION, INCLUDING IN THE TMR OR IN A MINERAL MIX.

™ Select DTX is a trademark of Select Sires Inc. and is manufactured by Agrarian Solutions [®]
All claims, representation and warranties, expressed or implied, are made only by Agrarian Solutions and not by Select Sires Inc.

Minnesota Valley Engineering is trusted by the best and engineered for the best.

Protecting and preserving the best genetics for over 55 years though industry-leading service and precision engineering.

Advanced Chemical Vacuum Rentention System

Low Liquid Nitrogen Consumption

Many tank sizes for different capacity and duration needs

Durability built for the barn

Maintaining health is vital to being profitable. BOVINE ACCELLYTE II is a specialized electrolyte for periods of stress, rehydration and pre-hydration during events such as: temperature extremes, calving, vaccinations, feed changes or illness.

BOVINE ACCELLYTE II contains electrolytes to replace those lost during periods of stress, energy to provide an added boost and minerals and vitamins to compensate for deficiencies from reduced intakes.

CONTACT YOUR REPRESENTATIVE TODAY TO HELP THEM MAINTAIN HEALTH!

Buyer assumes all responsibility for use, storage and bandling of this product. All claims, representations, and warrenties, expressed or implied, are made only by the company responsible for manufacturing and not by Select Sires, inc., its member cooperatives, its agents or employees. Bavine Accellyts II is manufactured for Select Sires inc., 11740 US 42N. Plain City, DH 43084.

There is never a second chance for their first feeding. First Day Formula® is made with 100% dried bovine colostrum providing the protective benefits newborn calves need to optimize immune development and health. First Day Formula offers consistency for every calf with the research-based recommended amount of ig6s and biosecurity from transmittable diseases, as well as feeding convenience whenever timing is a factor.

To give your new born ideal colostrum replacement or to supplement maternal colostrum,

CONTACT YOUR LOCAL REPRESENTATIVE TO LEARN MORE!

FINDING THE PERFECT SIRE IS NOW

You can now sort through our entire lineup to find the perfect sire for your next breeding season!

Get the bull you need to meet your expectations by setting your own parameters on EPDs, accuracies and percentile rankings. Compare results side-by-side to help you make the best decision for your herds' future!

www.selectsiresbeef.com

data all day long. The information provided allows me to determine when to breed cows based on the data. With the help of CowManager, we were able to get an A.I. service into nearly every cow and heifer before they went to summer pasture with clean-up bulls. I am looking forward to using CowManager to improve our success in putting in embryos. I like this system a lot and have recommended it to other beef cattle owners."

Wayne Fischer, Stonecreek Black Angus, Freeport, IL

- Maximize heat detection for more pregnancies
- Save labor and ensure a sustainable herd

Ask your Select Sires representative about the benefits of CowManager!

EXPECTED PROGENY DIFFERENCES Jerminology

- **EXPECTED PROGENY DIFFERENCE (EPD)** The expected difference in performance of a bull's progeny compared to the performance of another sire's progeny.
- Accuracy (Acc.) A measure of reliability of an EPD expressed between 0 and 1.0. Accuracies closer to 1.0 means the EPD is a more reliable estimate of a sire's true genetic value for the
- **Proof Positive** PROOF POSITIVE Bulls that are .85 or higher accuracy for Birth Weight EPD. ™Proof Positive is a trademark of Select Sires Inc.
- % Rank Based on percentages, this indicates where a bull's EPD ranks him in the entire population of his respective breed.
- Calving Ease Direct (CED) is the difference in percentage of unassisted births when a sire is bred to first calf heifers. A higher number is desirable.
- **Birth Weight (BW)** predicts the difference in average birth weight of a bull's calves compared to calves of another bull. Reported in pounds, a lower number is desirable.
- Weaning Weight (WW) predicts the difference in average 205-day weight of a bull's progeny compared to calves of another bull. Reported in pounds, a higher number is desirable.
- **Yearling Weight (YW)** predicts the difference in average 365-day weight of a bull's progeny compared to progeny of another bull. Reported in pounds, a higher number is generally
- Yearling Height (YH) The YH EPD predicts the difference in yearling hip height of a bull's progeny compared to progeny of another bull. Reported in inches, ideal values vary depending on production environment.
- Residual Average Daily Gain (RADG) expressed in pounds per day, is a predictor of a sire's genetic ability for postweaning gain in future progeny compared to that of other sires, given a constant amount of feed consumed.
- **Dry Matter Intake (DMI)** expressed in pounds per day, is a predictor of difference transmitting ability for feed intake during the postweaning phase, compared to that of other sires.
- **Scrotal Circumference (SC)** The SC EPD predicts the difference in yearling scrotal circumference of a bull's male progeny compared to progeny of another bull. Reported in centimeters, a larger number is desirable.
- **Docility (Doc)** is expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility. It predicts the average difference of progeny from a sire in comparison with another sire's calves. In herds where temperament problems are not an issue, this expected difference would not be realized.
- Calving Ease Maternal (CEM or MCE) is expressed as a difference in percentage of unassisted births of a sire's daughters as first-calf heifers when compared to daughters of other sires. Reported as a percentage, a higher value is desirable.
- Milk (MILK) The milk EPD predicts the difference in average 205-day weight of a bull's daughters' calves compared to the calves from daughters of another bull. Reported in pounds, ideal milk values depend heavily upon the nutritional environment of the herd.
- Maternal Weaning Weight (MWW Simmental); Milk and Growth (M&G Hereford); Total Maternal (TM - Red Angus) - The EPD predicts the Weaning Weight of a bull's daughters' progeny and reflects both the milking ability of a bull's daughters and the growth potential of their calves. Reported in pounds, higher numbers are generally desirable.
- Stayability (STAY Red Angus & Simmental) The stayability EPD predicts the probability of a bull's daughters staying in production to at least six years of age compared to daughters of another bull. Reported as a percentage, a higher value is desirable.
- **CARCASS TRAITS** EPDs for carcass traits are calculated using weighted averages of yearling ultrasounds and progeny carcass data.
- Carcass Weight (CW) The EPD predicts the difference in hot carcass weight of a bull's progeny compared to progeny of all other bulls evaluated at a given endpoint. Reported in pounds, a higher number is generally desirable.
- Marbling (MARB, IMF) The EPD predicts the difference in average USDA Marbling score of a bull's progeny compared to progeny of another bull at a similar end point. Reported in degrees of a Marbling score, higher values are desirable.
- Ribeve Area (REA) The EPD predicts the difference in ribeve area of a bull's progeny compared to the progeny of another bull and is an indicator of total muscle in the carcass. Reported in square inches, larger numbers are generally desirable.
- Fat (FAT) The EPD predicts the difference in fat thickness of carcasses, measured between the 12th and 13th ribs, of a bull's progeny compared to progeny of another bull. Reported in inches, lower values are desirable.
- Yield Grade (YG Simmental) The EPD predicts differences in USDA Yield Grade of a bull's progeny compared to progeny of another bull. Reported in tenths of a USDA YG, lower numbers are desirable.

ANGUS:

- Cow Energy Value (\$EN) expressed in dollars saved per cow per year, the EPD assesses differences in cow energy requirements for daughters of sires. A larger value is more favorable when comparing two animals (more dollars saved on feed energy expenses). \$EN savings differences account for lactation energy requirements and mature size of cows.
- Maternal Weaned Calf Value (\$M) an index, expressed in dollars per head, predicts profitability differences from conception to weaning with the underlying breeding objective assuming that individuals retain their own replacement females within herd and sell the rest of the cull female and all male progeny as feeder calves. The model assumes commercial producers will replace 25% of their breeding females in the first generation and 20% of their breeding females in each subsequent generation. Traits included are as follows: calving ease direct, calving ease maternal, weaning weight, milk, heifer pregnancy, docility, mature cow weight, claw set and foot angle.
- Weaned Calf Value (\$W) an index value expressed in dollars per head, is the expected average difference in future progeny performance for preweaning merit. \$W includes both revenue and cost adjustments associated with differences in birth weight, weaning direct growth, maternal milk and mature cow size.
- Feedlot Value (\$F) an index value expressed in dollars per head, is the expected average difference in future progeny performance for postweaning merit compared to progeny of other sires.
- Grid Value (\$G) an index value expressed in dollars per head, is the expected average difference in future progeny performance for carcass grid merit compared to progeny of other sires.
- **Beef Value (\$B)** an index value expressed in dollars per head, is the expected average difference in future progeny performance for postweaning and carcass value compared to progeny of other sires.
- Combined Value (\$C) an index value expressed in dollars per head, hat blends both maternal and terminal indexes using information and relationships from 14 different traits.
- Certified Angus Beef *Cerified Angus Beef and CAB are registered trademarks of Certified Angus Beef LLC.

SIMMENTAL:

- All-Purpose Index (API) Expressed in net dollars returned per cow exposed, evaluates Simmental sires being used on the entire cowherd (bred to both Angus first-calf heifers and mature cows) with a portion of the daughters retained for breeding and the steers and remaining heifers fed and sold on a carcass grade and yield basis. With the exception of shear force (tenderness), all EPDs are considered in this index.
- **Terminal Index (TI)** Expressed in net dollars returned per cow exposed, evaluates the merit of sires when bred to mature Angus cows and all progeny are fed and sold on a carcass grade and yield basis. Consequently, maternal traits such as milk, stayability and MCE are not considered in this index.
- **SimAngus** SimAngus[™] is a trademark of the American Simmental Association.

RED ANGUS:

- HerdBuilder Index (HB) As the name indicates, implementation of the HerdBuilder Index will assist producers in building profitable herds. The HerdBuilder Index is built using the following production scenario: Red Angus bulls mated to cows and heifers (resulting progeny 34 Red Angus, 14 Simmental), replacement heifers retained from within the herd, and all remaining progeny sold on a quality-based carcass grid.
- **GridMaster Index (GM)** While Red Angus has traditionally been known as a superior maternal breed, those who have retained ownership in Red Angus calves know of their potential to excel in the feedvard and ultimately hang a premium carcass. The GridMaster Index is built using the following production scenario: Red Angus bulls mated to cows (resulting progeny 34 Red Angus, 14 Simmental) and all progeny sold on a quality-based carcass grid.

HEREFORD:

- Baldy Maternal Index (BMI\$) This is an index to maximize profit for commercial cow-calf producers who use Hereford bulls in rotational crossbreeding programs on Angus-based cows. Retained ownership of calves through the feedlot phase of production is maintained and the cattle are to be marketed on a CHB pricing grid.
- Certified Hereford Beef Index (CHB\$) This is a terminal sire index, where Hereford bulls are used on British-cross cows and all offspring are sold as fed cattle on a CHB pricing grid. There is no emphasis on milk or fertility since all cattle will be terminal. This index promotes growth and carcass.

SUPPLEMENTAL INFORMATION

To order Select Sires or Accelerated Genetics beef semen:

- Contact your local Select Sires representative. To find a representative in your area, see the back cover of this directory.
- Order online at www.selectsiresbeef.com or www.accelgen.com

To order A.I. certificates:

Visit www.selectsiresbeef.com, www.accelgen.com or call our customer service line at 1-800-251-3049 to order A.I. Certificates.

Photo Requests:

To request a sire photo to be e-mailed to you or to submit progeny photos, contact Morgan Cook at mcook@selectsires.com or (231) 629-0156.

These protocol sheets were assembled by the *Beef Reproduction Task Force*. Programs are intended to promote sustainable food production systems by the beef industry through sound reproductive management practices for use in replacement heifers and postpartum cows. The Beef Reproduction Task Force recommends working with a licensed veterinarian for proper use and application of all reproductive hormones. **Approved 8-19-2019**.

BEEF COW PROTOCOLS - 2020

HEAT DETECTION

Select Synch

Select Synch + CIDR®

PG 6-day CIDR®

Heat detect and AI days 0 to 3. Administer CIDR to non-responders and heat detect and AI days 9 to 12. Protocol may be used in heifers.

FIXED-TIME AI (TAI)*

7-day CO-Synch + CIDR®

5-day CO-Synch + CIDR®

Perform TAI at 72 ± 2 hr after CIDR removal with GnRH at TAI. Two injections of PG 8 ± 2 hr apart are required for this protocol.

HEAT DETECT & TIME AI (TAI)

Select Synch & TAI

Select Synch + CIDR® & TAI

Heat detect and AI day 7 to 10 and TAI all non-responders 72 - 84 hr after PG with GnRH at TAI.

PG 6-day CIDR® & TAI

Heat detect & AI days 0 to 3. Administer CIDR to non-responders & heat detect and AI days 9 to 12. TAI non-responders 72 - 84 hr after CIDR removal with GnRH at AI. Protocol may be used in heifers.

FIXED-TIME AI (TAI)*

for Bos Indicus cows only

Bos Indicus PG 5-day + CIDR®

Perform TAI at 66 ± 2 hr after CIDR removal with GnRH at TAI.

* The time listed for <u>"Fixed-time AI"</u> should be considered as the approximate average time of insemination. This should be based on the number of cows to inseminate, labor, and facilities.

These protocol sheets were assembled by the *Beef Reproduction Task Force*. Programs are intended to promote sustainable food production systems by the beef industry through sound reproductive management practices for replacement heifers and postpartum cows. The Beef Reproduction Task Force recommends working with a licensed veterinarian for proper use and application of all reproductive hormones. **Approved 8-19-2019**

Handling Frozen Semen Straws

Proper semen handling is essential to maintain optimum reproductive performance of your A.I. breeding program. To maintain the high quality of semen you purchased from your Select Sires representative, you must pay strict attention to the many details of semen handling outlined on this poster. If you have questions about the correct handling procedures for Select Sires semen, please call you Select Sires Reproductive Solutions Specialist.

STRAW RETRIEVAL AND THAWING

- Avoid raising straws above the frost line. (1)
- On new canes, bend the identification tab up to a 45° angle. (2)
- Use the forceps to remove one straw at a time from the top. If it takes more than 10 seconds to retrieve the straw, lower the canister back into the tank and allow to re-cool for 20 to 30 seconds. (3)

• To retrieve straws from the bottom goblet, grasp the cane and raise it until the straws are even with other cane tops. Hold the cane and canister with one hand. With your forceps in the other hand, remove the desired straw and place it in the thaw water. (5)

LOADING THE INSEMINATION GUN

- Before loading the insemination gun, pre-warm the barrel by stroking it vigorously with your hand five or six times.
- Make sure the plunger is back about six inches to allow for insertion of the straw.
- Remove the straw from the thaw water and wipe it completely dry with a paper towel.
- Check to see that the straw contains semen from the desired bull and that a small bubble is at the crimped end.
- If the bubble is not at the crimped end, gently tap the straw until the bubble moves to its correct position.
- Place the cotton plug end of the straw in the gun. It will stop at exactly the right depth.
- Wipe the scissors with a paper towel and cut the straw at a right angle ¼" below the lab seal. (6)
- Slide the plastic sheath over the straw and gun and firmly attach the sheath and gun together. (7 and 8)
- Inspect the straw end of the gun to ensure a proper seal between sheath and straw. (9)
- Wrap loaded guns in a paper towel or in a plastic sheath cover to provide both thermal and hygienic protection and place inside your clothing for transport to the cow. (10)

Each conventionally processed semen straw (not sex sorted) shall be used only for insemination of a female bovine. ALL OTHER USES OF BOVINE SEMEN FROM SELECT SIRES INC. AND ITS AFFILIATES ARE STRICTLY
PROHIBITED WITHOUT THE PRIOR WRITTEN CONSENT OF SELECT SIRES INC. INCLUDING (WITHOUT LIMITATION) GENOTYPING, SEQUENCING, CLONING, GENETIC ANALYSIS, GENETIC MANIPULATION OR FOR RESEARCH. Select Sires inc., its member cooperatives, its agents or employees cannot and do not guarantee the conception rate, gender, quality or productivy to be obtained
in connection with the use of its products or recommended techniques. It makes no warranties of any kind whatsoever, expressed or implied, which extend beyond the description of its
products and hereby disclaims all warranties of merchantability and fitness for a particular purpose. In the unlikely event that any of our products shall be proven to be defective, damages
resulting from their use shall exclude consequential damages and be limited to the purchase price of the product.
